#Problem 2

Six months before its annual convention, The Computer Science Conference (CSC) must determine how many rooms to reserve. CSC believes the number of people attending the convention will be normally distributed with a mean of 5000 and a standard deviation of 1000.(Clearly, this demand must be rounded to an integer since only whole people attend the conference.) At this time, CSC can reserve rooms at a cost of $50 per room. CSC can reserve up to 8000 rooms, but it must reserve rooms in blocks of 100. CSC must pay the $50 room cost even if the room is not occupied. If the number of people attending the convention exceeds the number of rooms reserved, extra rooms must be reserved at a cost of $80 per room. (Do the following steps by hand or using MS Excel, and run the simulation using Python and include the .py file in the submission folder.)

3 a) Develop a simulation model for this problem. You can use MS Excel to depict the model.

4 Excel Link:

https://docs.google.com/spreadsheets/d/1Ixzctwm52LUKEqy2GMHFIvFayYj4lwwON9eWs3r5q4E/edit?usp=sha

5 b) Using the trial-and-error method, determine the number of rooms that should be reserved to minimize the expected cost.

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The appropritе sample size is over the mean number of guests and is not an integer multiple of room blocks
The appropritе sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is an integer
multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an
integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks
The approprite sample size is over the mean number of guests and is not an integer multiple of room blocks

13 The null and alternative hypothesis.

$$\{H0 : > 300,000\}$$
$$\{H1 : <= 300,000\}$$

According to 93% confidence coefficient. The level of significance = .07

$$P - value\ 0.0556173352$$

With the large p-value, We have 93% confident fail to reject the null hypothesis

14 Problem 3

14.1 Author: Yunting Chiu

14.2 email: yc6705a@american.edu

A ticket from Indianapolis to Orlando on Deleast Airlines sells for $150. The plane can hold 100 people. It costs $8000 to fly an empty plane. The airline incurs variable costs of $30 (food and fuel) for each person on the plane. If the flight is overbooked, anyone who cannot get a seat receives $300 in compensation. Not everyone who has a reservation shows up for the flight. The number of people with reservations who actually show up for the flight is binomial with p = 0.95. (Do the following steps by hand or using MS Excel, and run the simulation using Python and include the .py file in the submission folder).

[ ]:
```
# install the required libraries
import math
from scipy import stats
```

```
import statistics
```

15 3a

a) To maximize expected profit, how many reservations for the flight should be taken by Deleast?

- The maximum profit can be obtained by selling 105 flight tickets.

[ ]:
```
ticketPrice = 150
planeCapacity = 100
fixedFlightCost = 8000
variableFlightCostPerPerson = 30
overBookCostPerPerson = 300
chanceOfShowingUp = 0.95
# revenueEach = []
profitEach = []

# Let us simulate the number of tickets sold from 100 to 129. That is we␣
 ↪simulate 30 samples only
NumberOfTicketsSoldEnd = 129
NumberOfTicketsSold = 100
dict = {}
while NumberOfTicketsSold <= NumberOfTicketsSoldEnd:
  passengersArrived = math.ceil(NumberOfTicketsSold * chanceOfShowingUp) #␣
 ↪professor used `roundup` in MS excel
  passengersBoardingThePlane = min(passengersArrived, planeCapacity)
  if passengersArrived > 100:
    numberOfRebooking = passengersArrived - passengersBoardingThePlane
  else:
    numberOfRebooking = 0
  costToDeleast = fixedFlightCost + variableFlightCostPerPerson *␣
 ↪passengersBoardingThePlane + numberOfRebooking * overBookCostPerPerson
  revenue = NumberOfTicketsSold * ticketPrice
  profit = revenue - costToDeleast
  #revenueEach.append(revenue)
  profitEach.append(profit)
  dict[NumberOfTicketsSold] = profit # save the NumberOfTicketsSold and profit␣
 ↪as keys and values
  NumberOfTicketsSold += 1
maxProfit = max(profitEach)

# find out the nest number of tickets sold
for i, j in dict.items():
  if j == maxProfit:
    print("The maximum profit can be obtained by selling {} flight tickets.".
 ↪format(i))
print("We have {} sample sizes for the simulation".format(len(dict)))
```

```
The maximum profit can be obtained by selling 105 flight tickets.
We have 30 sample sizes for the simulation
```

16 3b

b) What is the associated expected profit for this number of reservations?

- $4750

[ ]:
```
print("The associated expected profit for this number of reservations is {}␣
↪dollars".format(maxProfit))
```

```
The associated expected profit for this number of reservations is 4750 dollars
```

17 3C

c) Provide a Hypothesis test with alpha=0.05 for the associated expected profit (from part a).

17.1 Hypothesis Test (t test: with 30 samples)

- H0: profit = 4750
- Ha: profit $\neq$ 4750

17.2 Interpretation

With the small p-value 1.3161944583304568e-08, we have evidence to reject the null hypothesis, meaning that the the expected profit is not equal to $4750 with 95 % confidence interval.

[ ]:
```
oneSampleTtest = stats.ttest_1samp(profitEach, 4750)
print(oneSampleTtest)
```

```
Ttest_1sampResult(statistic=-7.804797247267218, pvalue=1.3161944583304568e-08)
```

[ ]:
```
# for small samples (<50) we use t-statistics
oneSampleTtest = stats.ttest_1samp(profitEach, 4750)
print(oneSampleTtest) # [0] is a T-stat, [1] is a p-value

# 95% confidence interval
alpha = 0.05

# state the hypothesis test
if oneSampleTtest[1] <= alpha:
  print("With the small p-value, We have 95 % confident to reject the null␣
↪hypothesis")
else:
```

```
  print("With the large p-value, We have 95 % confident fail to reject the null␣
↪hypothesis")
```

```
Ttest_1sampResult(statistic=-7.804797247267218, pvalue=1.3161944583304568e-08)
With the small p-value, We have 95 % confident to reject the null hypothesis
```

18 3E

e) Deleast Airlines would like to know if the expected profit is bellow $5000. Conduct a statistical analysis to answer the question with 97% confidence coefficient. Clearly determine the null and alternative hypothesis.

18.1 Hypothesis Test

- H0: profit $<$ 5000
- Ha: profit $>=$ 5000

18.2 Interpretation

With the large p-value 0.9999999997570608, we fail to reject the null hypothesis, meaning that the the expected profit is not bellow $5000 with 97 % confidence interval.
